Glassfab becomes Suntuitive Certified partner

Jenison, Mich., Dec.10, 2018 - Suntuitive® Dynamic Glass is pleased to announce the addition of Glassfab Tempering Services Inc., to their Certified Fabricator program. Suntuitive is the world's most adopted dynamic glass product and this agreement will bring the talent of the Glassfab operation into production and distribution of the product. Glassfab is a leading full service architectural glass fabricator with two locations in the western United States, Tracy, California and Sparks, NV. Glassfab began operations in 2006, and over the past 12+ years has produced material for major projects throughout the west coast and Hawaiian Islands. The addition to the certified network was an exciting one for Paul Ogburn, Suntuitive's Chief Operating Officer.

"It's wonderful to have a fabricator of Glassfab's caliber in our network. They bring a sincere commitment to quality and service along with a best in the industry reputation and an excellent management team that absolutely cares about the customer and providing them with the best products and services possible."

Glassfab's operations feature state of the art equipment throughout and boast significant capabilities to meet virtually any architectural design need or code requirement. "The addition of Glassfab to the Suntuitive network was driven by the continued growth of Suntuitive in the west and the need to have a exceptional performing, well-positioned fabricator that can handle the additional business the Suntuitive sales team is providing" said Namrata Vora, Chief Revenue Officer for Suntuitive Dynamic Glass. Glassfab recently shipped their first order of Suntuitive glass and is expecting and increasing demand

"We pride ourselves in delivering excellent products with the highest in standards and so we are excited to add to that with an innovative offering like Suntuitive," said Brian Frea, Vice President of Operations, Glassfab Tempering Services Inc.

Suntuitive Glass is the most advanced, yet simplest, dynamic glass technology available. With Suntuitive Glass, architects, building owners, building professionals and

homeowners can specify an adaptive glazing system that transitions seamlessly between clear and tinted.

Suntuitive dynamic glass works through the use of a thermochromic interlayer that is activated by heat from direct sunlight, causing the window to tint as necessary. The thermochromic elements are embedded in a PVB (polyvinyl butyl) interlayer, which is then laminated between two pieces of glass. This laminate is then incorporated into the final product, a dynamic insulated glass unit (dIGU). There is no electricity used to make this resilient product work and the window unit installs in the same way a traditional unit does.

About Glassfab Tempering Services Inc.

Glassfab Tempering Services, Inc. Tracy, California began operation in August, 2006. After more than 2 decades of experience in the business, a management team decided to start a glass fabrication and a glass tempering Service Company. Our company attributes its existence, success and growth, to a combination of local market support, and our team experience. Our strong desire for superior quality products and genuine customer service, are also our key ingredients. Glassfab intends to deliver excellent architectural glass products and services, to its local custom shower door companies, glass shops, and architectural glazing contractors. All our growth and expansion plans are intended to meet our valued customer requirements consistently, for the present and the future.
